

Art.No 29111 - 01

Calcium acetate solution

Description Ready-to-use Calcium acetate solution for hardening up of mineral oil based Blasocut, B-Cool and Vasco emulsions, acting as an antifoam.

Properties The water hardness together with Blasocut, B-Cool and Vasco forms fine calcium soaps which effectively prevents foaming.

When to use it When fresh or used Blasocut, B-Cool or Vasco emulsions show an increased foaming tendency, especially in soft water or if the permissible water hardness is not reached.

Not to be used and not effective with Vasco 1000, Vasco 5000 and with synthetic Grindex and Synergy solutions.

How to use it Dosage:

- 1 liter Calcium acetate solution per 1'000 liters hardens up by 5°dH.
- 1 liter Calcium acetate solution per 1'000 liters hardens up by 9°fH.
- 1 liter Calcium acetate solution per 1'000 liters hardens up by 90 ppm.

Handling/Storage Storage: Store in closed original container at temperature from +5°C to +40°C (41°F to 104°F). Protect against frost.

Transport: No hazardous good according to ADR

Safety and environmental aspects EC - waste code 16 10 01. Water endangering class 1. For more detailed information please consult the EC Safety Data Sheet.

Packaging units 1 / 5 / 20 liters
